

CLOUD SECURITY ASSESSMENTS

Cloud Security Assessments

As organizations continue to increase their adoption of cloud service providers (CSPs), they face multiple challenges with integration, configuration, compliance, and sufficient auditing of their cloud deployments. We're here to help simplify and secure the cloud architecture you rely on to run your business.

Cloud security assessments aren't just audits (or at least they shouldn't be). They should help organizations proactively identify potential vulnerabilities and enhancement opportunities within their cloud infrastructure. Our goal is to help you address these evolving challenges.

Like cloud environments, assessments and assessors can vary greatly. Having an experienced (and trusted) cybersecurity partner can make all the difference when it comes to identifying and addressing risks to your cloud environment. We've built and deployed cloud environments, that's what makes us different. Leveraging that extensive experience allows SEVN-X to help its customers ACHIEVE BETTER CYBERSECURITY. Here's a breakdown of our multi-faceted approach to cloud security:

Interviews

SEVN-X will meet with project sponsors and key stakeholders to understand the current (and desired) security state, as well as your goals and priorities.

Configuration

Not all services are secure by default, prompting a need to review default and configured service settings for insecure settings—the biggest weakness facing organizations in the cloud.

Architecture

SEVN-X reviews your current architecture, third-party integrations, and custom development efforts to create comprehensive documentation.

Logging and Monitoring

This consists of holistic reviews of various audit logs in cloud infrastructures & ensures proper security monitoring, alerting, and audit capabilities are accounted for in your security blueprint.

Why Use SEVN-X for Your Next Assessment?

SEVN-X benefits from having both strategic and technical experts. It's also all we do. We don't maintain an accounting firm and moonlight as security professionals. Our team knows the cloud, knows security, and appreciates that our customers trust us for no-fluff reports that contain actionable and decisive remediation guidance.
