

CYBERSECURITY STRATEGY

Cybersecurity Strategy & Roadmap Development

Perhaps you know that you need to address cybersecurity at your organization but are struggling with how to do so. To make meaningful progress towards greater cyber resiliency, organizations should have a defined and comprehensive strategic plan or roadmap of activities to accomplish.

A Cybersecurity Plan or Roadmap should consider various elements including:

- ∇ the organization's information assets and the value of the assets to the organization,
- ∇ current configuration of the IT infrastructure and Business environment,
- ∇ organizational goals and objectives,
- ∇ the current threat environment and how the threats may impact the organization,
- ∇ regulatory compliance requirements such as PCI, HIPAA, and NYDFS, and
- ∇ the people, process, and technology required to support the business.

Could My Organization Benefit From a Security Framework Assessment?

Many organizations could benefit from a cybersecurity strategy / roadmap exercise, including organization that:

- ∇ don't know where to start when addressing cybersecurity or lack internal expertise,
- ∇ are dealing with regulatory compliance issues or are trying to address audit issues related to cybersecurity, and
- ∇ consistently have less-than-ideal penetration testing results.

Why Use SEVN-X to Help Build Your Cybersecurity Roadmap?

Our mission at SEVN-X is to help our customers achieve better cybersecurity. Our Advisory Team brings expertise in developing and implementing cybersecurity roadmaps and improving cybersecurity programs for organizations.

SEVN-X will help prioritize your cybersecurity initiatives and help make the initiatives actionable.
