

TABLETOP EXERCISES

What are Tabletop Exercises?

Tabletop exercises prepare your team to handle real incidents by simulating realistic crisis scenarios in a controlled environment. Most organizations have incident response plans, but few have tested whether their teams can execute them under pressure.

SEVN-X tabletops go beyond reading PowerPoint slides. We craft realistic scenarios tailored to your organization and ensure they are facilitated by practitioners with real-world incident command experience from ransomware attacks and data breaches.

Why conduct Tabletops?

Test Execution, Not Just Knowledge

Plans don't fail in documents. They fail when your CEO demands updates every 15 minutes, Legal and IT give conflicting guidance, and you're making critical decisions with incomplete information. We test whether your team can actually execute.

Identify Communication and Authority Gaps

Tabletops reveal breakdowns in escalation paths, decision authority, and cross-team coordination that only surface under realistic pressure.

Demonstrate Due Diligence

Regulatory frameworks and insurance carriers expect preparation. Our documentation provides evidence of readiness for both boards and auditors.

Could My Organization Benefit from Tabletop Exercises?

If you have an incident response plan but haven't stress-tested it, tabletops validate your team's ability to perform when it matters. Organizations facing regulatory requirements, acquisition due diligence, or expanding attack surfaces benefit most from realistic preparation.

Why Use SEVN-X for Your Next Exercise?

SEVN-X tabletops are facilitated by incident commanders actively responding to real breaches. We bring lessons from current threats and real decision pressure, not generic scenarios. You leave with documented gaps, prioritized remediation, and confidence your plan works.
