CLOUD SECURITY ASSESSMENTS

Simplify and secure the cloud architecture your business runs on.

Few environments built or managed in the last decade lack a cloud presence. We are seeing an increase in configuration gaps, integrations, compliance, and auditing. Our assessments aren't a checklist. We surface the weaknesses and the fixes before they turn into incidents. **We've built and deployed cloud environments ourselves, and that's what makes our reviews different.**

OUR APPROACH

Interviews

We meet with key stakeholders and environment owners to map your current security program, goals, and priorities.

Configuration

For legacy cloud tenants, few services are secure by default. We review these default and misconfigured environments to identify the biggest weaknesses in your cloud.

Architecture

We document your architecture, third-party integrations, and custom development so nothing lives in the dark.

Logging & Monitoring

We audit your logs and confirm monitoring, alerting, and audit coverage are accounted for in your security plans.

WHY SEVN-X

We are guided by cloud provider security benchmarks and best practices. **Security is all we do.** Our team pairs strategic and technical expertise, and our clients trust us for no-fluff reports with clear, decisive remediation guidance.

• Strategic + technical experts

• Security is all we do

• No-fluff, actionable reports
