SEVNX

SERVICE BRIEF · ADVERSARY SIMULATION

PURPLE TEAMING

Red teams and blue teams working side by side to find what your defenses miss.

A purple team engagement brings *your* internal blue team together with *our* external red team in one collaborative exercise. We run tailored attack scenarios, coordinate in real time, share indicators, and measure how your detective and preventative controls actually perform. **Purple teams are the clearest way to see exactly where attackers can slip past unprevented or undetected.**

WHAT YOU GAIN

Validate & Adjust Your Controls

We assess and help you tune your existing controls with curated testing aligned to real-world adversarial TTPs, from the MITRE framework.

Train Your Team

Hands-on training and knowledge transfer give your team real exposure to detection, investigation, and response.

Low-Stress & Collaborative

A cooperative exercise that strengthens controls across SIEM, EDR, network, IDS, & IPS with no pressure of a missed alert.

Faster Detection & Response

We tune your controls and monitoring to accelerate threat detection and response across the organization.

WHY SEVN-X

Our team brings experienced professionals from both adversarial and defensive backgrounds, evaluating your TTPs and defenses right alongside your people. T**hat combined perspective is how you achieve better cybersecurity.**

- Red team & blue team
- SIEM · EDR · network
- Real-world TTPs
