SERVICE BRIEF · THREAT READINESS

RANSOMWARE READINESS

Know exactly how your defenses hold up before ransomware ever strikes.

A SEVN-X Ransomware Readiness Assessment reveals how your detective and preventative controls stand against a real ransomware attack. We tailor each component to your environment and measure how your controls actually respond. **We simulate the techniques attackers use in the wild, without ever putting your systems or data at risk.**

WHAT WE ASSESS

Ransomware Simulation

We deploy a custom payload that mimics real ransomware behavior, safely, to see how your controls hold up.

Impact Mapping

We crawl your network with multiple user roles to find the file shares and permissions that let ransomware spread.

Endpoint Controls

We evaluate your EDR and managed detection for their ability to stop execution and alert you in time.

Processes

We review your backup and restore, incident response, awareness training, and patching strategies.

WHY SEVN-X

When it comes to ransomware, you need clear answers to your questions, not consulting jargon. **Our customers trust us for recommendations that are actionable and practical.**

- Built for mature programs
- Safe real-world simulation
- Actionable recommendations
