

SECURITY FRAMEWORK ASSESSMENT

See how your program measures up against the frameworks that matter to your business.

Security frameworks are established sets of practices for managing cybersecurity. A SEVN-X Framework Assessment shows you exactly how your program stacks up to the practices that apply to you, and where the gaps sit across people, process, and technology. **Whether you are starting from scratch or validating a mature program, we'll provide you a clear plan to act on.**

FRAMEWORKS WE ASSESS

The Standard - NIST CSF 2.0

Six functions, Govern, Identify, Protect, Detect, Respond, and Recover, and the most widely adopted framework today.

International - ISO 27001 & GDIK

The international standard for managing information security, with the benefit of a formal certification process.

State Specific - NYDFS, CCPA & More

Regulation requiring covered entities to appoint an expert to oversee and implement the cybersecurity program.

Industry Specific - PCI DSS, HIPAA & CMMC

Industry standards we map to your business, your customers, and the data you collect and process.

WHY SEVN-X

Our mission is to help you achieve better cybersecurity. Our Advisory Team brings deep experience across security frameworks and helps you build a program that follows them. **You get an independent and practical read on where you stand.**

• NIST · ISO · NYDFS

• PCI · HIPAA · CMMC

• Strategic planning & budgeting
