

TABLETOP EXERCISES

Prepare for an incident in a safe environment, learn from real incident commanders.

Most organizations have an incident response plan. Few have tested whether their team can execute it under real pressure. A SEVN-X tabletop puts your team through a realistic crisis likely to be seen by your organization and led by practitioners who respond to live incidents. **It goes well beyond reading slides, it shows you what actually happens when the clock is running.**

WHY RUN ONE

Test Execution, Not Just Knowledge

Plans fail under pressure, not on paper. We test whether your team can execute when the clock is running.

Communication & Authority Gaps

We surface breakdowns in escalation, decision authority, and coordination that only appear when pressure tested

Demonstrate Due Diligence

Regulators and insurers expect preparation. Our documentation gives boards and auditors evidence of prepared.

Realistic, Tailored Scenarios

We craft scenarios specific to your organization and current threats, going well beyond reading slides.

WHY SEVN-X

Our tabletops are led by incident commanders who are actively responding to real breaches. Train with real decision pressure in specific situations, not generic scenarios. **You leave with documented gaps, prioritized remediation, and confidence your plan works.**

● Real incident commanders

● Board & auditor ready

● Documented, prioritized gaps
